

Began with 4D v3.0 in 1995.

Developed programs in a team environment using 4D Server, as well as solo development using 4D standalone.

Migrated databases from v3.x to v6.x, then to v2003, v2004, v11, and v12.
Implemented the following plugins, as needed for a number of projects:

AreaListPro	ITK
PrintListPro	NTK
SuperReport	4D Pack
API Pack	4DIC

As an individual programmer, I have created database applications for a number of industries, including records storage management, materials trucking, medical pain relief, and futures trading. As a corporate developer, I built and maintained our in-house applications, including two databases that were migrated from v6 to v12. In addition, I created numerous archival systems accessible via 4D client or web-based for legacy patient accounting systems.

As a consultant programmer, I have assisted numerous companies implement new 4D based systems, worked with third-party programmers to resolve bugs and implement new features, trained users on system use, created system documentation, and advised on steps to expand 4D capabilities.
